

## Chemical Abortion: The Predatory Abortion Industry's New Frontier

### Background

[Nearly 40% of abortions](#) are committed with the Chemical Abortion Pills. Students for Life of America has fought legislation to mandate the distribution of free Chemical Abortion Pills on college campuses in various states. Now, the Biden Administration has quietly expanded the Chemical Abortion market during COVID-19, using the pandemic as an excuse to remove basic health and safety standards. Corporate Abortion is delivering death by mail without pre-screening for potentially life-threatening health complications, essentially forcing women to DIY their own abortion without medical oversight.

### What is Chemical Abortion?

Chemical Abortion (aka RU-486 or medical/medication abortion) is a two-drug regimen used to end the life of a preborn child within the first 10 weeks of pregnancy. The first drug, mifepristone, cuts off the pregnancy hormone, progesterone, to the baby – essentially starving the preborn child to death. The second drug, misoprostol, induces labor, expelling the dead baby from the woman's body.

### What are the risks of Chemical Abortion?

Chemical Abortion can lead to heavy vaginal bleeding, severe uterine and stomach cramps, fever, chills, nausea and vomiting, dizziness, immune system inhibition, future fertility issues, infection, and septic shock. If left untreated, an incomplete Chemical Abortion can even lead to death. In fact, [more than 20 women](#) that we know of have died after taking Chemical Abortion Pills. Additionally, there can be emotional and psychological repercussions associated with abortion including grief and regret, isolation, substance abuse, insomnia or nightmares, relationship issues, depression, anxiety, and even suicide.

### Abortion Pill Reversal

It is possible to reverse the effects of Chemical Abortion within 72 hours of taking the first drug, mifepristone, by administering progesterone. For more information, visit [ReverseAbortionPill.com](https://ReverseAbortionPill.com). 24/7 Helpline: (855) 209-4848
